

# $O(2^N)$ - Power of 2 Complexity

Examples:

- A fibonacci sequence
- Calling a function recursively twice within a recursive function.

If 1 item takes 1 second to process, 100 items take  
1,267,650,600,228,229,401,496,703,205,376  
(over 1 nonillion) seconds to process
