O(arrA*arrB)

Quadratic Complexity. The inner loop has O(arrB) iterations and is called arrA times. This makes the runtime O(arrA*arrB) or abstracted as O(N*M)

```javascript
function logPairs(arrA, arrB) {
  for (let i = 0; i < arrA.length; i++) {
    for (let j = 0; j < arrB.length; j++) {
      for (let k = 0; k < 100000; k++) {
        console.log("i: ", arrA[i], "j: ", arrB[j])
      }
    }
  }
}
```
