Heads up!

This runs counter to how we calculate Big O when engaging with a single data input, because we always know that the single for loop will be a non-dominate term compared to the nested for loop.

In this example, the Big O notation is O(N^2) - we have dropped the non-dominant loop through arrA.

```javascript
function logTwoArrays(arrA, arrB){
  for(let i=0; i<arrA.length; i++){
    console.log(arrA[i])
    for(let j=0; j<arrA.length; j++){
      console.log(arrA[j])
    }
  }

  for(let j=0; j<arrA.length; j++){
    console.log(arrA[j])
  }
}
```
